

Monichron Version 2 Smart Watch in Design

(Expected delivery February 2019)

If you have **HEALTH ISSUES** and want to **KNOW** your health status, not just a device to count steps.

Tired of **inaccurate information** like a “5km run” when you did 9km or “HR is 90” when it is 68?

If you want your watch to respond to **YOUR NEEDS** and not what the supplier thinks you want.

Does your current health watch take a rocket scientist to setup?

WE HAVE:

- Quality health components
- Real-time readings
- Interface to your patient health record
- Display for messages and vibration alerts i.e. Oxygen is dropping too low
- Interface with your care giver

WE HAVE:

- Local storage on watch so that you do not lose information
- Quality CE certified components
- A high quality communication protocol with backup procedures
- Communication directly to central database via GSM. You don't need to have cell phone with you.

You need to be able to customise the way your watch functions

How **about artificial intelligence on your wrist?**

Including vibration alert integration specific to your needs and setup.

EASY SETUP

- Simple interface where you do not need to setup a mobile application to use. You just need to register your device to your name.
- Data uploads automatically via its own GSM you do not need to log into some interface to upload the data.

Monichron Version 2 Smart Watch in Design

(Expected delivery February 2019)

Secure communication using 3G,4G, LTE, GPRS, EDGE, WIFI, Bluetooth

Monitoring

- **Heart Rate**
- **Galvanic Skin Response**
Including **Electro Dermal Activity**
- **Temperature** – Body as well as ambient
- **Oxygen Saturation**
- Fall detection
- Epilepsy fit alert

Vibrator to alert the wearer under certain conditions i.e. Oxygen drops too low

OUR PASSION IS TO MAKE
PEOPLE WHO ARE **STRUGGLING WITH HEALTH HEALTHIER** AND LEAD A **BETTER QUALITY OF LIFE**
BY **MONITORING THEIR DISEASE IN REAL TIME WITH REAL TIME FEEDBACK**

FOCUSED ON EPILEPSY, COPD AND ASTHMA TO START WITH.
